

Benchmarking gRPC and RESTful Services for Real-Time IoT System

Anna Nordio - Student ID 2140710

Runtimes for Concurrency and Distribution

Academic year 2025 - 2026

UNIVERSITÀ
DEGLI STUDI
DI PADOVA

12th June 2026

Presentation Outline

UNIVERSITÀ
DEGLI STUDI
DI PADOVA

1. REST vs. gRPC
2. PoC Overview
3. Remarks and Corrections
4. Final Results
5. Learning Outcomes
6. Course Feedback

REST vs. gRPC

3-Layer Architecture Telemetry System

- **Virtual Sensor Layer:** for data generation
- **Gateway Layer:** dual-stack server for orchestration
- **Observability Layer:** web dashboard

Storage and analysis for benchmarking purposes

Remarks and Corrections

Confusing REST with HTTP/1.1

- REST is a resource-oriented architectural style, not a transport protocol;
- HTTP/1.1 and JSON are the most common implementation choice;
- REST vs. gRPC = Resources vs. Remote Procedures.

gRPC Browser Limitations

- Web browsers support HTTP/2 but block access to HTTP Trailing Headers;
- Trailing Headers are required by gRPC to transmit call status and error codes.

Final Results

- **Go Concurrency and Asynchronous Channels:** used Go runtime model for asynchronous Goroutines and created unbuffered and buffered asynchronous channels for I/O operations;
- **Distributed Networking Barriers:** found a solution to avoid Web APIs blocking access to Trailing Headers (Envoy Proxy)
- **Bundling and Runtime Distribution Barriers:** within the client application, troubleshooted Webpack configurations to handle incompatible modules that caused crashes at runtime;

- **Didactic Value and Engagement:** distinctive lecture style that challenges traditional habits, promoting critical conversation over passive learning;
- **Exam format:** hands-on approach with open project specifications;
- **Personal Retrospective:** started an ambitious PoC (maybe a little too ambitious) which caused time-management challenges.

Images Sources

- *Wallarm, "gRPC vs. REST: Comparing Key API Designs and Deciding Which One is Best."*

URL: <https://www.wallarm.com/what/grpc-vs-rest-comparing-key-api-designs-and-deciding-which-one-is-best>;

- Original architecture diagrams and benchmark charts were independently designed and generated via the local testing suite.
